

Formative Evaluation Plan

There will be four learners from my Pink Group from my advanced math class who will be applying previously taught concepts of multiplying and dividing to create an instructional video similar to the videos I provide for all my learners. This will be a performance-based project that will be uniquely created by my learners in this group. The duration of this session is 9 minutes and 30 seconds.

Reflection questions my learners will answer are: What did you like about this lesson? What did you learn today? Would you like to create another instructional video?
